STANDARD DESCRIPTIVE REPORT
COMPLETE KIT

GRÁPIA

Grápia (also known as garapeira) is a high-quality, durable hardwood, considered a noble timber for construction and furniture. It has a yellowish color and an excellent finish for painting. Durability is one of its main mechanical characteristics. It is resistant to decay and insect attacks. Grápia timber is highly valued by professionals due to its excellent structural behavior and ease of application.

WALLS

Made of Grápia timber, approximately 3.5 cm thick by 14 cm high, with variable lengths according to the project, fitted with a tongue-and-groove system, applied horizontally between solid Grápia posts, approximately 10.5 x 10.5 cm. Bathroom and kitchen walls are masonry for tile installation (no wood cladding on internal or external faces). Ceiling height approximately 2.57 m.

ROOF FRAMING

Grápia timber roof structure consisting of beams, rafters, battens, struts, and eave fascias in dimensions as required by the project. Grápia 2x10 planking for internal gable cladding for sloped-ceiling projects. Eave width approximately 60 cm.

CEILING LINING

Ceiling lined with angelim or similar timber. Eaves, veranda, and shelter areas have no lining.

JOINERY

Living room with straight window without shutters. Bedrooms with straight windows with shutters in Arana Cedar. Bathroom with awning-type straight window. Kitchen window straight without shutters. Internal doors: flat flush panel in angelim. External doors: panelled type in Arana Cedar. All windows are in Arana Cedar.
